

In a fragile world, with the difficulties we all share, every little change for the better does make a world of difference.

EnduroShield is a permanent non-stick, 'easy clean' barrier to various substrates such as glass, stainless steel and tiles & grout.

Harsh Chemicals Are Eliminated, Helping Us All Do A Little Bit For The Environment

The permanent easy clean protection of EnduroShield means that the use of harsh chemicals is eliminated, and because you clean less often, you use less water. Not only do you use less of this precious resource, but by not having cleaning chemicals going down your drain, you are helping to protect the waterways and oceans of the world. The benefit to the environment is cumulative and ongoing, a small way of making a change for all our futures.

A Germ Free Environment

The superior protection inhibits the growth of mould and fungi maintaining an 'as new' appearance for longer. This minimises the use of harsh chemicals designed to kill mould, fungi and their spores.

Green Case Study

EnduroShield was delighted to be specified and applied to the ground breaking Surry Hills Library in Sydney, Australia. The new building sets a benchmark in environmentally sustainable design. The Sydney building houses a new library, as well as a neighbourhood centre and childcare facilities. The new library spans two levels, the ground floor and the lower ground floor, and is linked by a glazed atrium filled with plants. To reduce reliance on air-conditioning, an open-air atrium combined with rooftop plants naturally filter the air while solar cells provide power and tanks to collect rain water.

The EnduroShield coating will protect the glazed surfaces by sealing the porosity of the glass. This will protect against staining, etching and the general deterioration caused not only by weather and pollution, but also by the sprinkler system that waters the plants. Due to the innovative design of the structure and the plant life within the atrium, access for general cleaning will be challenging, to say the least. By minimising the time spent cleaning, maintenance costs will be measurably reduced, and overall, the appearance of the Surry Hills atrium will benefit from the protection of the EnduroShield invisible coating.

“Up to 90% less cleaning without harsh chemicals”
